DETAILED ACTION

This is a first office action on the merits of patent application S. N. 10/731,558.

This communication is responsive to the "ELECTION" filed May 17, 2005.

Election/Restrictions

Applicant's election without traverse of Group II and Species 1 in the reply filed on May 17, 2005 is acknowledged.

Claims 1-13, 17 and 20-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention/species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 17, 2005. Concerning claim 17, it should be noted that the elected species consist of a single clutch, therefore, the claim has been withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-16 and 18-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Genise ('476).

Genise discloses a method of controlling a clutch assembly comprising means for monitoring vehicle operating inputs and outputs (THL, ES, IS, OS, GR, T), fault detecting means (Col. 5, lines 15-25; Col. 9, lines 6-31), means for disengaging (Col. 9, lines 5-39; 200) a centrifugal clutch (Fig. 5), throttle position sensor (THL), and engine speed sensor (ES).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Maurice et al. ('131), Ivey et al. ('036), Smyth ('060), Johnson et al. ('766) and Metzger et al. ('580) discloses another device for disengaging a clutch responsive to error/fault signals.
